

Calico Cloud

Getting Started with Zero Trust and Full-stack Observability

The Calico Cloud Quickstart will help you get a jumpstart on zero-trust workload security for your cloud-native applications. Tigera will assist in connecting your cluster to Calico Cloud, implement security policies, and provide guidance and recommendations to secure your cloud-native application during build, deploy, and runtime.

Scope

The Calico Cloud QuickStart covers the following,

- Connect a single Kubernetes cluster to Calico Cloud
- Containerized workload-based traffic flow analysis for a single application instance
- Security policies for a single application instance and namespace scoped policies (up to 10 policies)
- CIS benchmark reporting configuration
- Additional troubleshooting scenarios for workload-to-workload communication

Delivery

1. Purchase Calico Cloud Quickstart
 - a. Introductory session for requirement gathering and engagement walkthrough
2. Complete Calico Cloud Quickstart requirement gathering document
 - a. Customer completes requirement gathering document
 - b. Tigera evaluates the document with the customer
3. Connect Kubernetes cluster to Calico Cloud
 - a. Tigera conducts a live session with the customer to connect a Kubernetes cluster to Calico Cloud
4. Implement security policies and compliance
 - a. Hands-on working session with customer to analyze workload-to-workload communication from Application-level to Networking-level for an application
 - b. Recommend how to leverage security policy recommender
 - c. Develop and deploy security policies (up to 10)
 - d. Configure CIS benchmark reporting
5. Additional use-cases and troubleshooting
 - a. Provide a working session on how to troubleshoot workload-to-workload communication and how to secure it.
